

## Leg Ulceration – Trauma Origin

65 year-old male. History of diabetes (Type 1); Renal dialysis for past 1.5 years; Trauma to lower leg resulting in high exudate 6 cm x 10 cm wound with pain. EpiFLO applied [Mepilex + Aquacel Ag] and within 1 week extensive healing and epithelialization (except for small proximal region) with total resolution of pain.

**Week 0: Pre-EpiFLO traumatic leg wound**

**Week 1: Significant healing with almost complete epithelialization; Fully closed / healed 3 days later.**
